

Full SEO Audit: solo5estrellas.com

Date: 6 Oct 2026. Method: claude-seo audit procedure run inline (its fetch scripts were blocked by this sandbox's proxy guard, so pages were fetched with curl). Crawl: 399 URLs (300 random hotels from 3,332 hub-linked, all 62 collections, 17 regions, 7 cities, 6 chains and hub pages), 4 concurrent, 0.25 s delay, robots.txt respected. Search Console exports supplied by the client were used for indexing and traffic evidence.

Executive Summary

SEO Health Score: 39/100 (judgment-based; weights from the repo: Technical 22, Content 23, On-Page 20, Schema 10, AI 10, Images 5; Performance 10 not measured and excluded, others renormalized).

Category	Score	Weight
Technical SEO	30	22%
Content Quality	62	23%
On-Page SEO	25	20%
Schema / Structured Data	40	10%
Performance (CWV)	not measured	10%
AI Search Readiness	45	10%
Images	20	5%

Business type: Spanish-language luxury hotel booking site operated by Lorraine Travel; preferred-partner benefits; ColdFusion on IIS; shares data with WhataHotel.

Top 5 critical issues

1. No canonical tags on any crawled page; hotels linked under two URL variants (3,080 of 3,235 IDs)
2. Head markup broken on hotel, collection, city and chain pages: meta description lost, hreflang cut off
3. Legacy browse_country.cfm?countryid=64 (Turks & Caicos) earns 23% of clicks with title 'Bienvenido' and no canonical
4. Sitemap lists 14 URLs while 5,221 URLs are not indexed (1,963 discovered, 931 crawled, not indexed)
5. JSON-LD text corrupted with replacement characters on 206 pages; no Hotel schema

Top 5 quick wins

1. Close the unclosed meta title and hreflang quotes in the head template
2. Add self-referencing canonicals
3. 301 legacy browse_*.cfm and slug variants
4. Submit a segmented sitemap and add Sitemap: to robots.txt
5. Translate English titles; fix 'Exclusive' in 67 chain/collection titles; shorten the title suffix

Crawl facts

Template	Pages crawled	Avg words	Avg TTFB (s)	Avg internal links
Hotels	300	971	0.58	43
Collections	62	2,143	0.57	96
Regions	17	3,886	0.54	333
Cities	7	1,211	2.50	164
Chains	6	3,195	0.64	113
Home and hubs	7	n/a	0.4-0.6	47-456

All 399 returned 200. 6,421 unique internal link targets were not crawled; a random 250 returned 246 x 200, 3 x 400 (slugs containing), 1 x 404 (/sitemap/).

Technical SEO (30/100)

What works

- HTTPS and HTTP/2; gzip enabled
- robots.txt is well structured and allows ChatGPT-User on purpose
- All 399 crawled pages returned 200 (no 5xx); lang="es" declared
- Search Console shows indexed pages growing from 390 to 5,774 (10 Jul to 19 Sep 2026)

Findings

- **[Critical] No canonical tag on any crawled page.** 0 of 399 crawled pages (300 hotels, 62 collections, 17 regions, 7 cities, 6 chains, others) have rel=canonical. Search Console reports 492 pages as 'Duplicate without user-selected canonical'. *Fix:* Output a self-referencing absolute canonical on every indexable template (one host, lowercase slug).
- **[Critical] Almost every hotel is linked under two URL variants, both returning 200.** 3,080 of 3,235 hotel IDs seen in internal links appear with two slugs (hyphen and underscore, e.g. /hotels/4839/blackberry-farm.html and /hotels/4839/blackberry_farm.html). Any slug resolves with 200 (/hotels/1048/anything.html). Search Console shows 81 IDs indexed under 2-3 variants. *Fix:* Pick one slug per ID, 301 all variants, return 404 for unknown IDs, canonicalize.
- **[Critical] Head markup is malformed on all hotel, collection, city and chain pages.** 289 of 300 hotel pages, 61 of 62 collections, 7 of 7 cities and 6 of 6 chains contain , which swallows the following script block. *Fix:* Fix the template: close the quotes, fill the title variable or remove the tag, repair hreflang. Re-crawl and check Search Console URL Inspection.
- **[Critical] Legacy parameter URLs are indexed and carry traffic.** 11 browse_.cfm?id URLs appear in Search Console; browse_country.cfm?countryid=64 (Islas Turcas y Caicos) has 29 of 124 clicks and returns 200 with title 'Bienvenido', no canonical, no redirect. *Fix:** 301 each legacy URL to its clean URL, then rebuild the page.
- **[High] Soft 404s and malformed hotel URLs.** Unknown IDs return 200 (/cities/9999/foo.html). 14 hotel links contain , ** or tabs inside the slug (e.g. /hotels/2894/sonora_resort__all-inclusive.html) and return 400. Search Console: 120 pages not found (404), 65 redirect pages. *Fix:* Sanitize slugs at the source; real 404/410 for missing IDs; fix internal links.
- **[High] Sitemap covers 14 URLs; robots.txt has no Sitemap line.** /sitemap.xml lists 14 URLs (no hotels, cities, chains, regions; identical lastmod). The crawl found about 3,235 hotel IDs from hub links alone. Search Console shows 5,221 not-indexed URLs including 1,963 'Discovered - currently not indexed' and 931 'Crawled - currently not indexed'. *Fix:* Segmented sitemap index with real lastmod; add Sitemap: to robots.txt; submit in GSC and Bing.
- **[Medium] Server response is slow on city pages.** City pages average 2.5 s to first byte (New York 3.4 s, London 3.0 s, Cancun 2.8 s); other templates 0.4-0.6 s. *Fix:* Cache city pages; lazy-load hotel lists.
- **[Medium] No cache headers or security headers; software disclosed.** Home response has no Cache-Control, ETag, Strict-Transport-Security, X-Content-Type-Options or similar; X-Powered-By: ASP.NET and Server: Microsoft-IIS/10.0 are exposed; CFID cookie expires in 2056. *Fix:* Add caching, HSTS and standard headers; remove version headers; session cookies.
- **[Medium] 1,646 pages blocked by robots.txt in Search Console.** The crawl found 500 internal links to /booking/ (intended Disallow). Example URLs for the 1,646 are not in the export, so it is unconfirmed that only /booking/ is affected. *Fix:* Open Page indexing > Blocked by robots.txt and confirm example URLs.

Content Quality (62/100)

What works

- Hotel pages: median 1,233 words with expert perspective, benefits comparison and FAQ
- Collection pages average 2,237 words; chain pages 3,195 words; region pages 3,886 words
- Spanish copy is generally readable and professional

Findings

- **[High] 31% of sampled hotel pages are thin.** 94 of 300 hotel pages have under 300 words of visible text (about 210 words, e.g. Amanjiwo, Amankora, Conrad Dublin, W Sydney). *Fix:* Expert text and verified benefits before indexing; noindex until improved.
- **[High] Spanish copy defects (see proposal section 4).** Mixed tu/usted, Title Case, typos such as 'Excusive' in 67 of 68 chain/collection titles and 'Nnoche' in offers, English titles on core pages. *Fix:* Spanish editorial style guide and template fixes.
- **[High] No editorial content.** No guides, comparisons, neighborhood pages or named authors; Search Console shows head terms nearly absent (hoteles de lujo: 5 impressions). *Fix:* City hubs and content clusters per the proposal.
- **[Medium] Repetitive template text and AI-generated sections.** The repo's content scorer flags the sampled hotel page 'repetitive' (36 repetition score; overall 95). Pros and cons, ratings and comparisons are labeled as AI-generated. *Fix:* Human review, unique first paragraphs and FAQ answers per hotel.

On-Page SEO (25/100)

What works

- Each page type has one H1 (398 of 399; /hotels-by-flight-time/ has none)
- Hotel titles are unique per hotel

Findings

- **[Critical] Meta descriptions missing or generic.** 367 of 399 pages have no readable meta description (head bug above); 24 carry the sitewide generic 'Los mejores hoteles de lujo de 5 estrellas del mundo'; all 17 region pages use it. *Fix:* Unique descriptions from template fields.
- **[High] Titles: wrong language, typo, generic, too long.** 7 pages titled 'Bienvenido'; English titles on /collection/, /destinations/, /destination/; 'Preferred Partner | Official Exclusive Perks' on 67 of 68 chain and collection pages (English, typo, duplicate pattern); median title length 66 characters, 275 of 399 over 60 because of the suffix '| Solo 5 Estrellas por Lorraine Travel'. 19 titles are shared by 44 pages. *Fix:* Spanish title templates under 60 characters, brand shortened.
- **[High] hreflang wrong everywhere.** No crawled page has a self-referencing es tag; hotel, collection, city and chain pages have a malformed es tag and no x-default; region and hub pages point es to the homepage and x-default to the English homepage. *Fix:* Page-level reciprocal es/en pairs with WhataHotel.
- **[Medium] Hotel pages have no links to their own city, country, chain or guide.** Hotel pages average 43 internal links, almost all global navigation; no breadcrumbs on hotel pages (BreadcrumbList on 0 of 300). *Fix:* Template-level contextual links and breadcrumbs.
- **[Low] Loading messages are H2 headings.** 'Cargando tarifas...' and similar are

on hotel pages. *Fix:* Use non-heading elements.

Schema / Structured Data (40/100)

What works

- JSON-LD present on all 399 pages; FAQPage on 190 of 300 hotels; rich chain/collection graphs (BreadcrumbList, FAQPage, ItemList) on 67 pages

Findings

- **[High] JSON-LD text is corrupted with replacement characters on 206 pages.** The schema text contains U+FFFD in place of accented letters (e.g. 'n?mero', 'Cr?dito'). It is not visible in page text, but search engines and AI systems read it. *Fix:* Fix the encoding at the data source; re-validate.
- **[High] No Hotel or LodgingBusiness schema; offers modeled as zero-price.** 0 of 300 hotel pages have Hotel schema; 206 carry TravelAgency + Offer with price 0 and OnlineOnly availability. *Fix:* Add Hotel entity; describe perks as visible text.
- **[High] Organization graph points to WhataHotel profiles and omits Lorraine Travel.** sameAs lists facebook.com/whatahotel and instagram.com/whatahotel; no parentOrganization. *Fix:* Rebuild entity graph.
- **[Medium] City, region, and home pages carry only Organization and WebSite.** 7 cities and 17 regions have no BreadcrumbList or ItemList. *Fix:* Add on hubs where the visible list matches.
- **[Low] Chain and collection schema may over-claim.** Chain/collection graphs include TravelAgency with OpeningHoursSpecification and GeoCoordinates on brand pages; verify these match visible content. *Fix:* Remove properties not shown on the page.

Performance (CWV)

What works

- Nothing confirmed

Findings

- **[Info] Core Web Vitals not measured.** PageSpeed Insights API quota was exhausted (HTTP 429) and the audit tool's own fetchers were blocked by this sandbox's proxy guard. Server timing and page weight were measured instead: HTML 14-180 KB; city pages 2.5 s TTFB. *Fix:* Pull CrUX and Lighthouse from Search Console or a local run.

AI Search Readiness (45/100)

What works

- robots.txt allows OAI-SearchBot, PerplexityBot and ChatGPT-User except /booking/
- Search Console shows 1,343 impressions in Google AI features since 18 May 2026 (Spain 304, Mexico 238, Argentina 170)
- FAQPage markup on 64% of hotels

Findings

- **[High] Claims lack sources, dates and named authors.** Perks (breakfast for two, \$100 credit) are stated without verification dates or program terms; no named experts. *Fix:* Verified-benefits blocks and advisor profiles.
- **[High] Brand entity unclear.** Brand queries earned 3 clicks and 137 impressions; the schema graph does not link Solo5Estrellas to Lorraine Travel. *Fix:* Entity strategy in proposal section 18.
- **[Info] No llms.txt, no markdown alternates.** /llms.txt returns 404. Google does not use it; the benefit is optional. *Fix:* Low priority.

Images (20/100)

What works

- Nothing confirmed

Findings

- **[High] No hotel images in server HTML.** All 300 sampled hotel pages contain exactly 1 (the logo); 323 of 399 pages have one or none. Galleries are probably JavaScript-loaded. Image alt text and lazy loading could not be assessed. *Fix:* Server-render the hero image with alt text, dimensions and fetchpriority; lazy-load the rest. Confirm with GSC URL Inspection.

Not covered

- Core Web Vitals and Lighthouse (PageSpeed API quota exhausted; the tool's browser-based checks were not run).
- Visual and mobile screenshots (no browser in this session).
- Backlinks, keyword volumes and competitors (Semrush units exhausted).
- GA4, local/GBP signals, drift baseline (none exists yet).
- agentic_check --ua-matrix (only for sites you control; not run).
- Full hotel inventory: 3,235 hotel IDs seen from 399 pages; the full count needs a database export.
